Cold Email Infrastructure for New Agencies: Project Brief

Oct 13, 2026 · @George

Overview

A fully self-serve cold email infrastructure platform for new and small agencies: buy Outlook inboxes and domains at checkout, get a complete launch kit, and be sending the same day. No sales call, no 400-inbox minimum. Working name TBD.

Problem and opportunity

Existing providers are built for big lead gen agencies. New agency owners get priced and gated out.

- **Minimums are too high.** Lunatro starts at $199/month for 400 inboxes. A new agency with 1 to 3 clients needs 20 to 50.
- **Gated onboarding.** Most premium providers require an application call before you can buy.
- **Inboxes alone don't get you results.** Beginners still have to figure out domains, warmup, sequencer setup, copy and leads on their own.
- **Proven demand.** George has driven around $2k MRR to Lunatro through referrals alone, with no dedicated product or funnel.

Target customer

Primary: new and early-stage outbound and AI automation agencies, 0 to 10 clients, running their first cold email campaigns.

- Usually solo founders or tiny teams
- Already using or about to use Instantly, Smartlead or EmailBison
- Price sensitive, want to start small and scale
- Low technical confidence on DNS, warmup and deliverability

Secondary: freelancers and in-house SDRs at small B2B companies doing their own outbound.

Positioning and USP

Positioning line: Cold email infrastructure for new agencies. Start small, send today.

Three pillars:

1. **Start small.** Pay per inbox, no 400-inbox minimum. Scale up in a click.
2. **Launch kit included.** Inboxes, domains, warmup, sequencer connection, copy templates and a starter lead list in one bundle. We sell the outcome, not just the plumbing.
3. **Burned inbox guarantee.** Inbox health is monitored automatically and anything that tanks gets replaced free.

We deliberately don't compete with Lunatro and similar on big agency volume. We own the beginner end of the market.

Product offer and pricing

Three monthly plans, priced in USD to match the market. Figures are placeholders until Microsoft licence, domain and server costs are confirmed.

Plan	Price/month	Inboxes	Domains	Launch kit	Burned inbox replacement
Starter	$49	25	1	Yes	Yes
Growth	$99	100	2	Yes	Yes
Scale	$179	300	3	Yes	Priority

Add-ons: extra inboxes in packs of 25, extra domains, and use your own existing domains. Monthly billing, cancel anytime.

Core features and user flow

The whole journey happens in-app, no human touchpoint needed.

1. Pick a plan on the pricing page and check out with Stripe.
2. Short onboarding form: business details, sending use case, sequencer used. Feeds automated vetting.
3. Choose domain names from suggestions or bring your own.
4. We auto-configure domains, SPF, DKIM, DMARC and inboxes on Outlook infrastructure.
5. One-click export to Instantly, Smartlead or EmailBison, or CSV download.
6. Launch kit unlocks: copy templates, warmup guide, starter lead list.

7. Dashboard shows inbox health and sending status, with replacement requests in one click.

Key screens for Claude Design: landing page, pricing, checkout and onboarding, domain picker, setup progress, main dashboard, inbox health view, launch kit library, billing and settings.

Automated vetting and abuse protection

No sales call means software has to do the gatekeeping. One bad sender can burn tenant reputation for every customer.

- **At signup:** verified business email, card checks, use case questions, block known spam patterns and disposable emails.
- **Starter limits:** new accounts begin on lower daily send caps that rise with good behaviour.
- **Live monitoring:** bounce rate, spam complaints and reply rates tracked per account, with auto-pause on red flags.
- **Isolation:** customers spread across separate tenants and IP pools so one account can't sink the rest.
- **Clear acceptable use policy** with instant suspension for violations.

Competitors

The main reference point is Lunatro.mx: $199/month for 4 domains and 400 Outlook inboxes on Azure with custom SMTP, up to 30k emails/month, setup in 24 hours, Slack support, and access gated behind an application call. Its customers are established lead gen agencies like Belkins and NuOpp.

Other providers to research on pricing and minimums: Mailforge, Infraforge, Zapmail, Scaledmail, Inframail, Maildoso, Hypertide. Gap to confirm: none lead with small plans plus a bundled launch kit for beginners.

Go-to-market

Launch through channels George already owns, then add paid and partner growth.

- **AICampus:** members building agencies are the exact customer. Offer a launch discount and make it the recommended infra in the curriculum.
- **Content:** George's channels showing real campaigns run on the platform.
- **Bookd clients and network:** move suitable new client setups onto the platform.

- **Affiliate programme:** recurring commission for coaches and community owners, the deal George wanted from Lunatro.
- **Free tools as lead magnets:** domain name generator, DNS checker, deliverability test.

Brand and design direction

The product should feel simple and confidence-building for someone setting up cold email for the first time.

- **Tone:** direct, casual, no jargon. Punchy copy, no fluff.
- **Feel:** clean SaaS, friendly rather than enterprise. Reassuring status states (green = good to send).
- **Landing page priorities:** clear headline on starting small, pricing visible above the fold, a 3-step "how it works", sequencer logos, the guarantee, and a no-call self-serve CTA.
- **Dashboard priorities:** at-a-glance inbox health, setup progress tracker, launch kit always one click away.
- **Avoid:** dark hacker aesthetic, walls of technical DNS detail, "book a call" buttons.

Open questions and risks

- [ ] Product name and domain
- [ ] Unit costs per inbox: Microsoft licences, domains, SMTP servers. Confirms whether the pricing works.
- [ ] Who builds the SMTP and tenant management layer: in-house, contractor, or white-label partner first?
- [ ] Microsoft policy risk: what happens if tenants get banned, and how fast can we recover?
- [ ] Support model without a sales call: docs, chat, community?
- [ ] Relationship with Lunatro: compete, partner, or white-label their infra to start?
